A colorful loose fill option with superior impact absorbing properties

Description

Loose fill rubber is a superior surface made from clean, recycled tires. A unique rubber granule, it offers the best impact absorbing properties of all the loose fill surfaces.

Available in several colors, it provides an aesthetically pleasing, functional surface for your play area. Recycled loose fill rubber can be more economical than loose fill wood products since it doesn't decompose, requiring lower maintenance, top offs, and replacement than many other loose fill choices. It is unique among loose fill surfaces, because of the color choices that are available.

GT Impax Loose Fill Rubber drains well after a rain and will not attract insects or animals. It also helps eliminate the growing waste pile of used tires in the world, by recycling them into a useful, long lasting, beneficial product!

Benefits

- One of the highest impact attenuation ratings
- Affordability, with color choices
- Soft-touch, splinter free
- Won't blow away or over-compact saves maintenance and money
- Mold, animal, and insect resistant
- 100% recycled, environmentally friendly
- Installed with proper drainage, does not freeze in cold climatic conditions

Tips

- Use wear mats to reduce displacement in "kick out" areas, raking is required to maintain compliant depths
- Containment systems like our PlayCurbs will reduce the spread of surfacing to non-play areas

Basic Specification

Product is manufactured rubber chunks comprised of recycled tire rubber. The manufacturing process allows for a few oversized pieces.

Product must prove to be clean and non-toxic. Product is to have a free metal content of less than .01% (Wire free.)

Most playground installations utilize six inches of loose fill rubber material.

This product meets all applicable ASTM standards. For more information, please refer to our complete product specification.
