

**Basics at a glance:**

- Price ..... High
- Maintenance ..... Low-Mid
- Access ..... Mid-High
- Color Options ..... No
- Warranty ..... 5 years

The natural look of grass with appropriate impact attenuation and low maintenance.

**Description**

GT Impax Turf is an engineered grass product designed to bring the look of nature to your play environment. Unlike real grass, it offers height appropriate impact attenuation, while providing the appearance of a beautiful lawn. However, GT Turf never needs mowing.

GT Turf is available in two weights, Dura, with a face weight of 50 oz requires infill, while Ultra, with a face weight of 80 oz does not. Your turf will be laid over a cushion pad to provide drainage and fall attenuation properties up to 12'. After the Turf layer is installed, the infill is worked into the blades to discourage flattening. Although infill is not required for Ultra, it is recommended to aid against blade compaction. Properly installed it offers adequate drainage, and offers great impact attenuation, long wear, and ADA accessibility in playground applications.

**Benefits**

- Lower maintenance
- Appealing, natural look and feel
- UV resistant
- Cooler surface temperature than many unitary surface types

**Tips**

- Great option for nature inspired play areas
- Use in any area where a low maintenance grass look is desirable
- Ask your local representative about additional grass blade types that may be available in your area
- Raking is recommended to distribute infill and discourage blade compaction

**Basic Specification**

Turf Surfacing utilizes a two layer system, with a top layer comprised of a combination of turf fiber and polypropylene.

The cushion layer is comprised of rubber buffings and urethane, or porous closed-cell composite material, and is installed under this top layer to meet necessary fall height requirements.

This product meets all applicable ASTM standards. For more information, please refer to our complete product specification.
